

Create a GitHub repository.

Step 0 :

- + Creates your GitHub account (sign up) and/or
- + Log to this account (sign in)
- + Install (if not done) a [configure the ssh access](#).

Your login is here

Step 1 : Clic New on the repository page.

Step 2 : enter parameters.

A screenshot of the 'Create a new repository' form on GitHub. The form is divided into two sections: 'General' and 'Configuration'. In the 'General' section, there is a field for 'Repository name' and a 'Description' field. In the 'Configuration' section, there are options for 'Choose visibility *' (set to 'Public'), 'Start with a template' (set to 'No template'), 'Add README' (set to 'Off'), 'Add .gitignore' (set to 'No .gitignore'), and 'Add license' (set to 'No license'). A green 'Create repository' button is at the bottom right. Annotations include a speech bubble pointing to the 'Repository name' field saying 'The definitive package name', a speech bubble pointing to the 'Description' field saying 'A line description', and a speech bubble pointing to the 'Create repository' button saying 'That's it: Default options are fine. Readme, license, etc will be defined afterwards.' A large white arrow points from the 'New' button in the previous screenshot to the 'Create a new repository' form.
