

# Create a GitHub repository.

## Step 0 :

- + Creates your GitHub account (sign up) and/or
- + Log to this account (sign in)
- + Install (if not done) a [configure the ssh access](#).

Your login is here

Step 1 : Clic New on the repository page.

## Step 2 : enter parameters.

A screenshot of the 'Create a new repository' form on GitHub. The form is divided into two sections: 'General' and 'Configuration'. In the 'General' section, there is a 'Repository name' field with a speech bubble pointing to it saying 'The definitive package name'. Below it is a 'Description' field with a speech bubble pointing to it saying 'A line description'. In the 'Configuration' section, there are options for 'Choose visibility \*' (set to 'Public'), 'Start with a template' (set to 'No template'), 'Add README' (set to 'Off'), 'Add .gitignore' (set to 'No .gitignore'), and 'Add license' (set to 'No license'). At the bottom right is a green 'Create repository' button. A speech bubble points to the bottom of the form saying 'That's it: Default options are fine. Readme, license, etc will be defined afterwards.'
