

Create a GitHub repository.

Step 0 :

- + Creates your GitHub account (sign up) and/or
- + Log to this account (sign in)
- + Install (if not done) a [configure the ssh access](#).

Your login is here

Step 1 : Clic New on the repository page.

Step 2 : enter parameters.

A screenshot of the 'Create a new repository' form on GitHub. The form is divided into two sections: 'General' and 'Configuration'. In the 'General' section, the 'Repository name' field is highlighted with a callout 'The definitive package name'. The 'Description' field is highlighted with a callout 'A line description'. In the 'Configuration' section, the 'Choose visibility' dropdown is set to 'Public'. The 'Add README', 'Add .gitignore', and 'Add license' sections are all set to 'No' or 'Off'. A callout 'That's it: Default options are fine. Readme, license, etc will be defined afterwards.' points to the bottom of the configuration section. A green 'Create repository' button is at the bottom right.
